Write Up

Are there any changes made to the proposed design?

There was nothing fundamentally different changed about the design.

Everything was implemented in the spec. The only exception are the exceptions. Since they had to be made public, they were moved to their own files.

Did the design document help with the implementation?

Yes. The design doc was extremely helpful in the implementation. I had a pretty different idea going in. I was going to represent the graph as a modified adjacency list and use DFS to generate the results.

How could the design have been better, clearer, or made the implementation easier?

I would have liked to know the correct spot to put my exceptions but other than that, it was very straight forward
